```python
##    --------------IMPORTING MODULES--------------------
import string
import random

if __name__ == "__main__":
    s1 = string.ascii_lowercase

    s2 = string.ascii_uppercase

    s3 = string.digits

    s4 = string.punctuation

    pslen = int(input("Enter password lenght\n"))
    s = []
    s.extend(list(s1))
    s.extend(list(s2))
    s.extend(list(s3))
    s.extend(list(s4))
##--------------SHUFFLING FOR STRONG PASSWORD--------------------
    random.shuffle(s)
    print("Your Password is :")
    print("".join(s[0:pslen]))
```

```
Enter password lenght
10
Your Password is :
r2g7-Yk!}$

Process finished with exit code 0
```
